## video

hands on

mit compsci intro in python stanford programming methodology in java stanford programming abstractions in c++

stanford programming paradigms stanford principles of computer systems mit performance engineering of software systems

intro to machine learning for coders

theory

mit algorithms intro mit design and analysis of algorithms mit automata, computability and complexity mit computation structures mit advanced data structures

morse theory

hopf alg (wrt combi) enumerative combi commutative alg (wrt combi) polytopes matroids

notes

stanford physics

stanford fourier theory

coxeter groups

repositories of notes

mit artificial intelligence

Dolgachev Kuang's (math) (mostly) compsci drives from universities in Israel Chua Milne

individual notes

intro to differential geometry discrete differential geometry differential forms geometry of manifolds topics in several complex variables

intro to analytic number theory complex dynamics algebraic topology intro to lie algebras intro to lie groups commutative algebra

rational lattices & their theta functions intro to algebraic geometry algebraic number theory cohomological class field theory algebraic geometry

error correcting codes combinatorial designs & groups klein quartic combinatorics algebraic combinatorics elliptic curves

compsci theory lab more algebraic combinatorics great ideas in compsci boolean analysis randomized algorithms quantum computing

computational techniques in num theory & alg geometry ext and tor set theory 1 set theory 2 von neumann algebras

mixing times of markov chains schramm loewner equations advanced probability stochastic calculus
